

PHASE 1 – DEMONSTRATION INTRODUCTION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 1 of 8

Project: EduGenie – Google Gemini Powered Learning Assistant

Demonstration Objective: To demonstrate the working of the EduGenie application from start to finish.

- During the demonstration, the presenter explains the project purpose, opens the application, enters a learning question, sends the request, and shows the generated response.

Demo Flow: Open Project → Run Application → Enter Question → Submit → Gemini Processing → Display Response → Verify Output.

SCREENSHOT PLACEHOLDER: Insert the project/application opening screen here.

PHASE 2 – PROJECT SETUP DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 2 of 8

- Start the project in the development environment used for implementation.
- Demonstrate that the required project files and dependencies are available.
- Show the application being started successfully.
- Explain the main project files/modules briefly and identify where the user interface and Gemini integration are implemented.
- Important: Do not display API keys, passwords, tokens, or other secret credentials.

SCREENSHOT PLACEHOLDER: Insert the development environment/project folder and running setup screenshot here.

PHASE 3 – USER INTERFACE DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 3 of 8

- Open the EduGenie user interface in the browser or application window.
- Explain the main elements visible on the screen, such as the project title, question/input area, submit button, and response area.
- Demonstrate how a student interacts with the application.
- Show that the interface is designed to make asking learning questions simple and clear.

SCREENSHOT PLACEHOLDER: Insert the EduGenie home/interface screenshot here.

PHASE 4 – INPUT / QUESTION DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 4 of 8

- Enter a suitable educational question into the input field.
- Example: Ask the assistant to explain a topic in simple words or provide an example.
- Click the appropriate submit/send button.
- Explain that the entered question is passed to the application logic and then to the configured Gemini service.

SCREENSHOT PLACEHOLDER: Insert the screenshot showing the entered question before submission.

PHASE 5 – GEMINI RESPONSE DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 5 of 8

- After submitting the question, demonstrate the generated response returned by the AI service.
- Explain that the response is generated based on the user's question and the configured prompt/model.
- Show how the response is displayed in the application.
- Demonstrate one additional question if required to show that the assistant can handle multiple learning queries.

SCREENSHOT PLACEHOLDER: Insert the Gemini-generated response screenshot here.

PHASE 6 – CODE & OUTPUT DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 6 of 8

- Briefly show the important implementation code responsible for user input, Gemini integration, request handling, and response display.
- Then run the application and demonstrate the corresponding output.
- Explain the relationship between the code and the visible application result.
- Code Evidence: Insert only relevant code. Keep secret API keys and credentials hidden.

CODE OUTPUT SCREENSHOT PLACEHOLDER: Insert terminal/console output or application execution output here.

PHASE 7 – TESTING & FINAL DEMONSTRATION

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 7 of 8

- Perform a final test using an educational question.
- Check whether the input is accepted and whether an appropriate response is displayed.
- Demonstrate normal application flow from input to output.
- Record the actual result of the test as Pass or Fail after execution.
- Evidence Checklist: Running application screenshot; input screenshot; response screenshot; code/output screenshot; final result screenshot.

SCREENSHOT PLACEHOLDER: Insert final working-output screenshot here.

PHASE 8 – DEMONSTRATION SUMMARY

EduGenie – Google Gemini Powered Learning Assistant

Project Demonstration Documentation | Page 8 of 8

- **Demonstration Result:** The EduGenie prototype demonstrates an interactive learning assistant workflow using Google Gemini.
- **Key points demonstrated:** Project setup, user interface, educational question input, Gemini processing, generated response, implementation code, and final output.
- **Benefits Demonstrated:** Quick learning assistance, interactive question answering, simple interface, and practical use of Generative AI in education.
- **Future Demonstration Scope:** Subject-wise learning, quizzes, multilingual support, voice interaction, progress tracking, and improved personalization.
- **Conclusion:** The demonstration verifies the intended end-to-end workflow of the EduGenie project. Replace all screenshot placeholders with actual project screenshots before submission.
